hta
GROUP LIMITED

COVENTRY, UK

ACCREDITED. INTEGRATED. FUTURE-READY.

Engineered confidence. Built in.

HTA Group Company Overview 2026

One accountable UK partner for laser cutting, sheet metal production, welding, finishing, inspection, powder coating and assembly.

ISO 9001:2015	EN ISO 3834	EN 15085-2	BS EN 1090-1
QUALITY MANAGEMENT	WELDING QUALITY	RAIL WELDING	CE MARKING

PART OF WEC GROUP

Built for complex manufacturing. Ready for scale.

A Coventry-based subcontract manufacturing partner with over five decades of engineering experience.

1973

Established — more than 50 years of manufacturing experience

24/7

Automated laser production supporting responsive lead times

4m × 2m

Maximum laser sheet format across HTA's high-high-power systems

30

Dedicated fabrication bays with MIG and TIG facilities

90,000 sq ft Coventry facility

ONE UK PARTNER. FEWER HAND-OFFS.

HTA delivers laser-cut parts, precision sheet metal components, welded fabrications and finished assemblies — all under one roof, backed by the wider capability and investment strength of WEC Group.

ACCREDITED QUALITY

Accreditation is not a badge. It is how we work.

Documented systems, qualified welding controls and recognised standards underpin the manufacturing route.

ISO

ISO 9001:2015

Quality management, controlled processes, corrective action and continual improvement.

3834

EN ISO 3834

Quality requirements for fusion welding, supported by controlled procedures and qualified personnel.

RAIL

EN 15085-2

Certification supporting welding of railway vehicles and components within the approved approved scope.

CE

BS EN 1090-1

Conformity assessment and CE marking compliance for relevant structural steel and and aluminium work.

CONTROLLED QUALITY LOOP

1 **PLAN**
Defined requirements and manufacture-manufacture-ready data

2 **VERIFY**
First-off, in-process and final inspection inspection

3 **RECORD**
Traceable evidence, FAIR / ISIR and batch batch records

4 **IMPROVE**
Corrective action and repeatable process process learning

External accreditation, certification and compliance apply to defined scopes; current certificates can be supplied with the RFQ response.

INTEGRATED MANUFACTURING

One partner. One controlled route to production.

A joined-up process from design data to finished, inspected and delivered product.

01

Design & DFM

3D modelling, reverse engineering and manufacture-ready data

02

Laser / Punch

Prototypes, repeat parts and high-volume blanks

03

Fold / Form

Precision bending, complex forms and bespoke tooling

04

Weld / Fabricate Fabricate

Manual and Robotic MIG/TIG manufacturing routes

05

Coat / Finish

In-house pre-treatment and powder coating

06

Inspect / Assemble

Metrology, weld assurance assurance and final assembly

07

Deliver / Stock

Own fleet and customer customer inventory solutions

FEWER SUPPLIER HAND-OFFS

SHORTER ROUTES

CLEAR ACCOUNTABILITY

CONSISTENT QUALITY

High-power laser cutting — speed, thickness and flexibility.

Two high-power TRUMPF systems support automated production across a broad material and thickness range.

24 kW + 12 kW

TRUMPF FIBRE LASER CAPABILITY

MAXIMUM SHEET 4000 × 2000 mm

FULLY AUTOMATED PRODUCTION

Mild steel	50 mm
Stainless steel	40 mm
Aluminium	30 mm
Copper	16 mm
Brass	12.7 mm

SPECIALIST ALLOYS Duplex stainless • Alloy 625 / 825 • 904 stainless • Titanium

24 kW performance: up to 3× faster than 6 kW and up to 70% lower nitrogen consumption on suitable applications.

Repeatable sheet metal production from punched features to complex forms. complex forms.

Selecting the right process for geometry, volume and cost — rather than forcing every part through the same route.

PRECISION FORMING

Multi-shift press brake production with capability for complex and bespoke forms.

CNC PUNCHING

TRUMPF TruPunch 3000
0.5–4 mm material range • 0.02 mm punching accuracy
Up to 900 strokes/min • repeatable formed features
Mild steel, stainless, aluminium, copper, brass and coated sheet

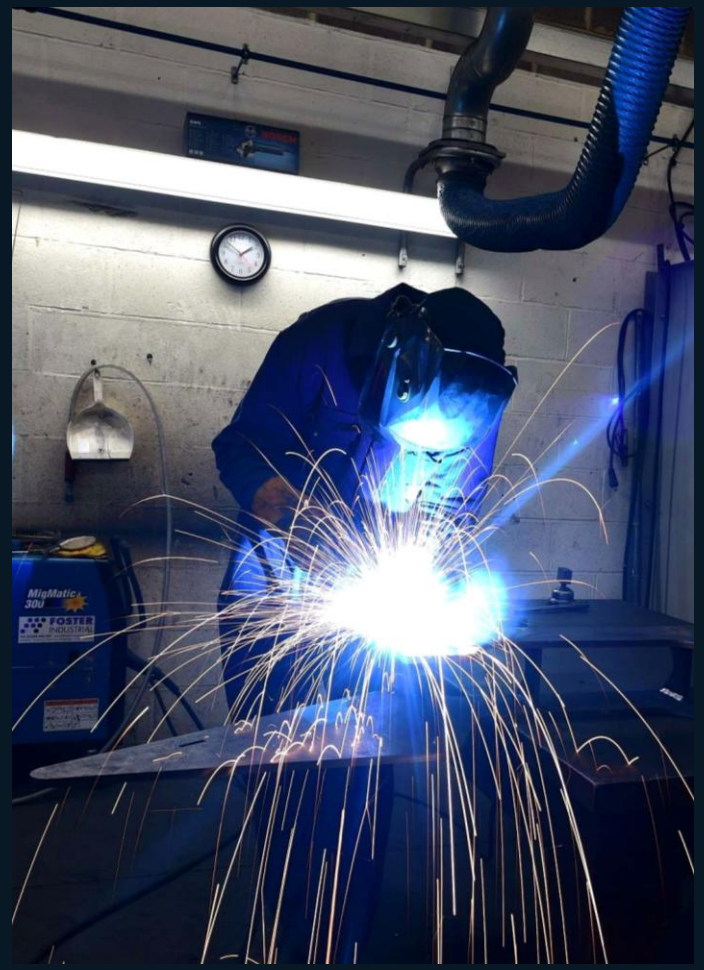

CNC FORMING

- Multi-shift press brake production
- Forming capability up to 4,040 mm
- CNC rolls for complex curves up to 2.5 m
- Bespoke tooling for specialist and challenging components

THE RIGHT PROCESS FOR COST, GEOMETRY & VOLUME

Manual expertise. Robotic repeatability.

Flexible fabrication routes for prototypes, complex assemblies and repeat production.

30

Dedicated fabrication bays with MIG and TIG facilities

Panasonic, Cloos and Cobot supports MIG and TIG processes across mild steel, stainless steel and aluminium, with assemblies up to 1,000 kg.

ARRIVING Q4 2026

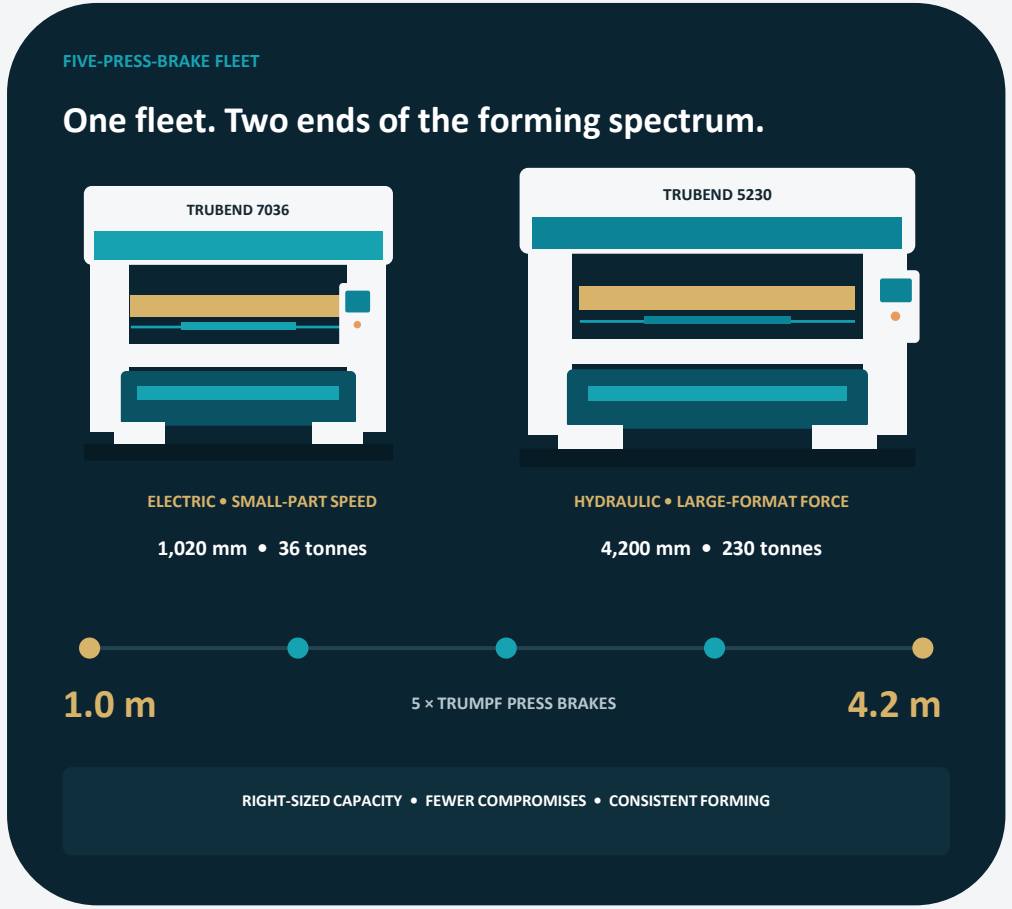

New FANUC robotic welding cell

- Flexible 3-station layout
- FANUC Arc Mate 120iD 6-axis robot
- 500 kg positioner for larger fabrications
- Simultaneous loading and welding
- Higher repeatability, productivity and capacity

Choose manual flexibility, robotic consistency — or a blended manufacturing route.

Precision forming—from compact parts to 4.2 m components.

Five TRUMPF press brakes balance high-speed small-part bending with large-format, high-tonnage forming.

CNC PRESS BRAKE CAPABILITY

5 press brakes

1.0–4.2 m
Bending length range.

36–230 t
Press force range.

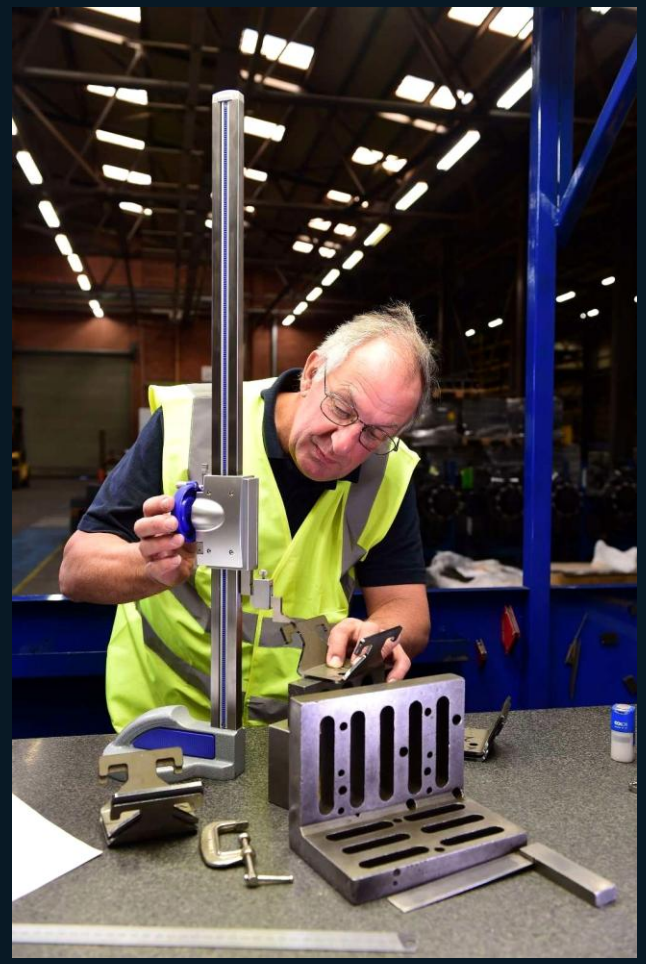

3D
Graphical programming and collision checking.

DESIGNED AROUND THE PART

- **RIGHT MACHINE FOR THE COMPONENT**
  Electric speed for compact parts; hydraulic force for large and demanding forms.
- **PROGRAMMED AND PROVEN IN 3D**
  On-machine or offline programming supports collision examination before the first bend.
- **FLEXIBLE VOLUMES**
  Supports prototypes, repeat components and multi-shift production requirements.

Quality engineered into every stage.

From first-off validation to routine production assurance and reverse engineering.

45,120
POINTS / SECOND

±0.035 mm
mm
SCANARM ACCURACY

3D inspection & scanning

Touch-probe and non-contact scanning for dimensional inspection and CAD comparison.

Weld macro assurance

In-house microscope equipment and a routine production macro testing schedule.

Controlled documentation

FAIR, ISIR, batch inspection and recorded manufacturing evidence.

Reverse engineering

Scan-to-CAD, accurate drawings and a faster route from sample part to manufacture.

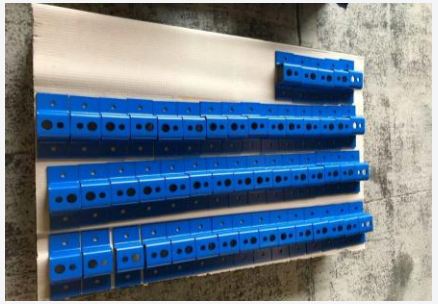

ISO 9001:2015 • EN ISO 3834 • EN 15085-2 • BS/EN 1090-1 • CUSTOMER APPROVALS

Finishing, assembly and delivery — kept under HTA control.

A complete route from fabricated component to protected, inspected and despatched product.

1500 H × 3000 L × 800 W 800 W

Maximum component size through the automated powder coating line

90%

Powder recovery system supporting efficient material use

4-stage stage

In-line pre-treatment before coating

Two automatic reciprocators • Epoxy, polyester and polyurethane • Architectural and made-to-order made-to-order colours

Mild steel • Stainless steel • Aluminium

COAT › ASSEMBLE › INSPECT › PACK › DELIVER

Own-fleet delivery and customer inventory options help reduce external hand-offs and support reliable supply.

SALES & RFQ SUMMARY

Capability quick reference.

A single-slide view of the key processes and headline capacity available at HTA.

CAPABILITY	EQUIPMENT / PROCESS	HEADLINE RANGE	CUSTOMER VALUE
LASER CUTTING	24 kW + 12 kW TRUMPF fibre lasers	4000 × 2000 mm sheets MS 50 | SS 40 | Al 30 | Cu 16 | Brass 12.7 mm	Automated speed, thickness range and specialist alloy experience
CNC PUNCHING	TRUMPF TruPunch 3000	0.5–4 mm | 0.02 mm accuracy Up to 900 strokes/min	Cost-effective repeat features and high-volume sheet processing
CNC FORMING	Press brakes + CNC rolls	Forming up to 4,040 mm Complex curves up to 2.5 m	Precision bending, complex forms and bespoke tooling routes
WELDING	30 bays + 3 robotic cells + FANUC cell Q4 2026	Existing robotic envelope 3000 × 1400 mm Assemblies up to 1,000 kg	Manual flexibility, robotic consistency and scalable capacity
POWDER COATING	Automated line + 4-stage pre-treatment	1500 H × 3000 L × 800 W 90% powder recovery	Durable finishes, broad colour range and fewer external hand-offs
QUALITY & CAD	FARO ScanArm + macro testing	45,120 points/sec | ±0.035 mm FAIR, ISIR, CAD comparison	Inspection evidence, reverse engineering and weld assurance

SEND YOUR RFQ • info@htagroup.co.uk

Investment that directly improves customer outcomes.

A deliberate programme of automation, high-power processing and stronger in-house assurance.

2024

12 kW automated fibre laser laser

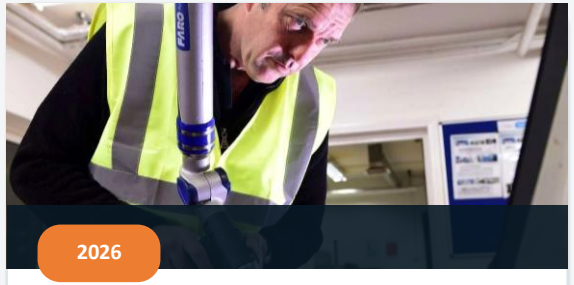

Expanded 4m × 2m laser capacity and created a faster, more flexible route for medium-to-heavy gauge work.

2025

24 kW TRUMPF fibre laser laser

Up to 3× faster than a 6 kW system on suitable applications, with up to 70% lower nitrogen consumption and stronger thick-material productivity.

2026

Expanded metrology & weld weld assurance

FARO touch-probe and laser scanning, CAD comparison, reverse engineering and routine in-house weld macro testing.

Q4 2026

New FANUC robotic welding cell

Flexible 3-station cell, Arc Mate 120iD robot, 500 kg positioner and simultaneous loading and welding.

CAPACITY REPEATABILITY QUALITY FASTER CUSTOMER RESPONSE

More capability. Less complexity.

The commercial case for consolidating manufacturing with one accountable UK partner.

One accountable partner

A single controlled route from design data through manufacture, finishing, inspection and inspection and delivery.

Faster response

24/7 automation, multi-process capability and local logistics support shorter routes and routes and quicker decisions.

Lower total supply-chain cost

Fewer hand-offs, less duplicated administration, reduced transport and fewer opportunities for delay.

Quality confidence

Integrated metrology, weld assurance and traceable process controls support repeatable repeatable output.

Scalable production

A route from prototypes and development work to batch manufacture and repeat production.

Group-backed resilience

Part of WEC Group — adding broader engineering depth, investment strength and supply-chain confidence.

CAPABILITY + CONTROL + CAPACITY = DELIVERY CONFIDENCE

Let’s manufacture what’s next.
